

## 5 Balancing Requirements & Constraints – Funding & Decision Criteria

Facility Type	Funding Sources	Value Management Criteria	Worked Example
<b>Religious</b>  Facilities primarily concerned with delivering religious values.	<ul style="list-style-type: none"> <li>▪ Khums</li> <li>▪ Zakaat</li> <li>▪ Soft-Loans</li> <li>▪ Sale proceeds of existing religious property</li> </ul>	<ul style="list-style-type: none"> <li>▪ Medium-term need evidenced.</li> <li>▪ Lifecycle costs can be met from sustainable level of membership subscriptions / donations.</li> </ul>	For example, it is considered (after logical and careful analysis) that an Imambargah for 1000 worshippers will be required in the next 15 years. Accordingly, a mosque of sufficient size would be considered an appropriate use of the acceptable funding sources. The construction of an Imambargah for 5,000 worshippers would not meet our value-management criteria.
<b>Social &amp; Communal</b>  Facilities primarily concerned with delivering cultural values, as well as for development / maintenance of community spirit.	<ul style="list-style-type: none"> <li>▪ Zakaat</li> <li>▪ Soft-Loans</li> <li>▪ Sale/refinance proceeds of existing commercial property.</li> </ul>	<ul style="list-style-type: none"> <li>▪ Community desirability &amp; demand evidenced.</li> <li>▪ Lifecycle costs can be partially offset from sustainable income streams, as well as some reliance on non-huqooq donations.</li> </ul>	For example, it is considered that (after logical and careful analysis) that a dedicated senior-citizens & youth space should be constructed, with the purpose of encouraging community unity. This would be funded by upfront donations, with lifecycle costs being met from affordable youth / senior-citizen subscriptions.
<b>Commercial &amp; Investment</b>  Facilities primarily concerned with generating funds to support (i) religious and (ii) social & communal facilities.	<ul style="list-style-type: none"> <li>▪ Investment from community members</li> <li>▪ Surplus Jamaat cashflows</li> <li>▪ Soft-loans</li> <li>▪ Sale/refinance proceeds of existing commercial property</li> </ul>	<ul style="list-style-type: none"> <li>▪ Superior return to risk-free returns over a similar timeframe (e.g. a fixed-term Bank deposit). Lifecycle costs should be met from within the facility, without recourse to the community.</li> <li>▪ Acceptable risk profile, such that "worst-case" does not affect wider charitable activities.</li> <li>▪ Compliant with UK-legislation and our community principles.</li> </ul>	For example, it is considered that (after logical and careful analysis) that £200,000 of surplus funds can be invested in a project that generates a return of 8% per annum, over 10 years. This compares favourably to the rate-of-return over a similar period, which is at that time 3% per annum. A facility that generated a 1% return and was of significant risk would not meet our value management criteria.
